

THE STEEL RIDDLE.

Wait, Dr. Aris, you said STEEL is an alloy? What is it made of?

It's a mix of IRON and CARBON, Leo!

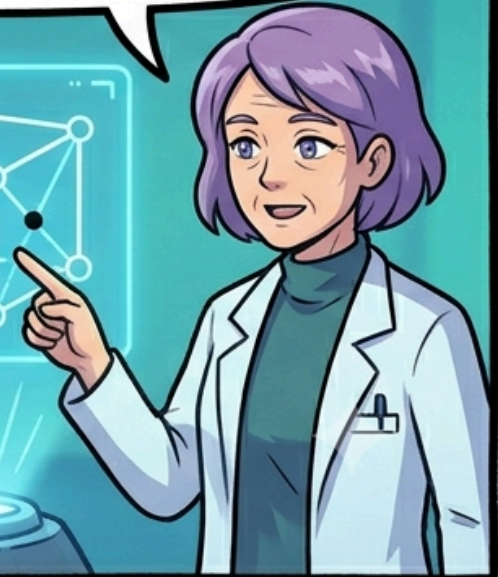

LEO

DR. ARIS

THE SECRET INGREDIENT.

Exactly! But that tiny bit of Carbon (0.2% to 2%) stops the Iron atoms from sliding easily. It *disrupts* the structure, making steel much, much harder and stronger!

THE MAGIC RECIPE.

Mira, why do people melt metals together?

Good question, Kai! That's how we make alloys!

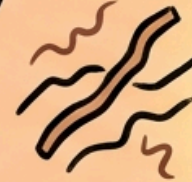

KAI

MIRA

STRONG & USEFUL.

See, pure copper is soft, and tin is brittle.

But together, they form BRONZE, and that's super strong for tools and armor!
